

# MSK Scans & Health MOTs

Are you experiencing pain in your tendons and muscles?

With an ultrasound scan we detect issues like tears and inflammation, as well as larger abnormalities.

Do you want to stay ahead of potential health issues with our MOT Health scans?

A Health MOT examines multiple organs and some blood vessels with the Abdomen and Renal Tract and can identify multiple health conditions and pathology in the abdomen often before symptoms appear.

Our **Ultrasound reports** are checked by a **Private Midland Health GP** who will be able to share the results with you and any further follow up or actions that may be required.

Scans will be carried out by Catherine, an **Advanced Practitioner Sonographer** with over 20 years scanning experience and a Master of Science Degree in Medical Ultrasound.

**Self-refer:** book your appointment at the time that suits you best.
